botek

NEU: Lagerprogramm Typ 01

System Einlippenbohrer

Das Unternehmen botek

Tiefe und präzise Bohrungen herzustellen, ist eine technische Herausforderung im Bereich der Metallbearbeitung. Die Spezialisierung auf die Tiefbohrtechnologie war 1974 die Idee zur Gründung der botek Präzisionsbohrtechnik GmbH in Riederich.

In dem zu einem international agierenden Tiefbohrwerkzeug-Komplettanbieter gewachsenen Unternehmen, entwickeln und fertigen heute im Stammwerk 550 Mitarbeiter Einlippen- und Zweilippenbohrer, Tiefbohrwerkzeuge der Systeme BTA und Ejektor sowie Sonderwerkzeuge.

Ein komplettes Produktprogramm rund um die Tiefbohrbearbeitung und ein Team von hochqualifizierten und engagierten Zerspanungsspezialisten machen botek zu einem kompetenten Partner für Automobilhersteller und deren Zulieferer, den Schiffsbau, die Hydraulik- und Luftfahrtindustrie sowie den Motoren-, Getriebe- und Maschinenbau.

Vorteile / Typenübersicht

Typ 01

Vorteile – auf einen Blick

1. Neue, modern konzipierte Tiefbohrwerkzeuge, leistungsstark und einfach in der Handhabung.
2. Sehr hohe Wirtschaftlichkeit bei optimaler Zerspanungsleistung.
3. Für den Einsatz auf CNC-Maschinen mit Kühlschmierstoffanlage besonders gut geeignet. Bohrtiefen bis $40 \times D$ in einem Bohrzyklus sind möglich. Werkzeuge sind auch auf Tiefbohrmaschinen mit sehr gutem Erfolg einsetzbar.
4. Keine Nachschleifarbeit mehr erforderlich.
5. Verschiedene Schneidplatten-Spanleitstufen entsprechend dem verwendeten Werkstückstoff lieferbar. Schneidplatten und Führungsleisten auch in beschichteter Ausführung erhältlich.
6. Schneidplatten und Führungsleisten wechselbar, bei einfachster Handhabung, ohne Nachjustieren der Einstellung innerhalb $\pm 0,01$ mm.
7. Bei Einsatz passender Wechselteile kann der Bohrkopfdurchmesser innerhalb von 0,5 mm verändert werden.
8. Ausführung mit verlängerten Führungsleisten (Typ 01-010) auch zum Überkreuzbohren geeignet.
9. Bohrungsqualitäten bedingt bis IT 8 möglich.
10. Kosten- und ressourcenschonende Neubestückung bei gelöteten Werkzeugen möglich.

Typenübersicht

| Typen | Bohrbereich | |
|--|--|--|
| Typ 01-001 Einlippen-Tiefbohrwerkzeug zum Vollbohren | Standardausführung mit 2 Führungsleisten Bohrbereich: Ø 12,00 - 17,99 mm | |
| Typ 01-000 Einlippen-Tiefbohrwerkzeug zum Vollbohren | Standardausführung mit 2 Führungsleisten Bohrbereich: Ø 18,00 - 43,99 mm | |
| Typ 01-011 Einlippen-Tiefbohrwerkzeug zum Vollbohren | Ausführung mit verlängerten Führungsleisten 4 Stück Bohrbereich: Ø 12,00 - 17,99 mm | |
| Typ 01-010 Einlippen-Tiefbohrwerkzeug zum Vollbohren | Ausführung mit verlängerten Führungsleisten 5 Stück Bohrbereich: Ø 18,00 - 43,99 mm | |
| Typ 01-020 Einlippen-Tiefbohrwerkzeug zum Vollbohren | Vollschaft-Ausführung mit 2 Führungsleisten Bohrbereich: Ø 18,00 - 43,99 mm eingeschränkte Länge je nach Bohrdurchmesser, bitte anfragen | |

Bestellbeispiel: 01-2513-000-25,00-1000-ZH32-10

| 17,50 - 17,99 | 01-172* -001 | 01-172* -011 |

Die Werkzeuge sind in Stufen von 0,05 mm lieferbar. Zwischenmaße in Stufen von 0,025 mm können durch Einsatz kleinerer Führungsleisten erzielt werden.

Die Werkzeuge werden mit Toleranz ± 0,01 mm geliefert.

Technische Informationen

Einlippen-Tiefbohrwerkzeug Typ 01

Leistungsdiagramme

Diese Werte sind Richtwerte für Vergütungsstahl mit ~ 800 N/mm² und können je nach Werkstückstoff, Werkstückbeschaffenheit sowie Zustand der Werkzeuge abweichen.

Kühlschmierstoffwerte

Eine sichere Späneabfuhr ist nur dann gewährleistet, wenn der Kühlschmierstoff in ausreichender Menge und Druck dem Werkzeug zugeführt wird.

Richtwerte für das Vollbohren von verschiedenen Werkstückstoffen

Richtwerte für die Schnittgeschwindigkeit und den Vorschub sind der untenstehenden Tabelle zu entnehmen. Da beim Tiefbohren viele Faktoren das Ergebnis beeinflussen, müssen diese Werte bei Bedarf angepasst werden.

| Werkstückstoff+ Festigkeitswerte | Vc (m/min) | f (mm/U) bei Bohrer-Ø (mm) | | | | Hartmetallsorten | | |
|---|---------------|----------------------------|---------------|---------------|-------------|------------------|--------------|----------------------|

Hochleistungsschneidplatten für hohe Produktivität und universellen Einsatz

Neue Spanleitstufe SP91 für Typ 01 Ø 12,00 bis 43,99 mm

Vorteile – auf einen Blick

1. **Höherer Vorschub und höhere Schnittgeschwindigkeit** gegenüber bisherigen Spanleitstufen SP1 und SP2.
2. **Produktivitätserhöhung bis über 400%** gegenüber konventionellen Einlippenbohrern.
3. **Höhere Standzeit pro Schneide** bei verbesserter Prozesssicherheit.
4. Positive Spanleitstufe für gute Spankontrolle auch bei langspanenden Stahlwerkstoffen.
5. Anwendungsbereich **ISO P** und **ISO M**.
6. Lieferbar in den **Standard-Schneidstoffen K30BX** (Ø 12,00 - 17,99 mm) und **P25BX** (Ø 18,00 - 43,99 mm).

Anwendungsbeispiele Typ 01/Vergleich

| Werkstoff: | 40CrMnNiMo8-6-4/1.2738 | X17CrNi16-2/1.4057 |
| Festigkeit: | 1100 N/mm ² | 950 N/mm ² |
| Anwendung: | Formenbau | Apparatebau |
| Werkzeugtyp: | Typ 01 | Typ 01 |
| Bohr-Ø: | 15 mm | 13,5 mm |
| Bohrtiefe: | 1100 mm | 260 mm |
| Schnittgeschwindigkeit v_c : | 60 m/min | 90 m/min |
| Vorschub f : | 0,11 mm | 0,125 mm |
| Kühlschmierstoff: | Emulsion | Tiefbohröl |

Vorteile – auf einen Blick

1. Neue, modern konzipierte Tiefbohrwerkzeuge, leistungsstark und einfach in der Handhabung.
2. Sehr hohe Wirtschaftlichkeit bei optimaler Zerspanungsleistung.
3. Für den Einsatz auf CNC-Maschinen mit Kühlschmierstoffanlage besonders gut geeignet. Bohrtiefen bis $40 \times D$ in einem Bohrzyklus sind möglich. Werkzeuge sind auch auf Tiefbohrmaschinen mit sehr gutem Erfolg einsetzbar.
4. Keine Nachschleifarbeit mehr erforderlich.
5. Verschiedene Schneidplatten-Spanleitstufen entsprechend dem verwendeten Werkstückstoff lieferbar. Schneidplatten und Führungsleisten auch in beschichteter Ausführung erhältlich.
6. Schneidplatten und Führungsleisten wechselbar, bei einfachster Handhabung, ohne Nachjustieren der Einstellung innerhalb $\pm 0,01$ mm.
7. Bei Einsatz passender Wechselteile kann der Bohrkopfdurchmesser innerhalb von 0,5 mm verändert werden.
8. Ausführung mit verlängerten Führungsleisten auch zum Überkreuzbohren geeignet.
9. Bohrungsqualitäten bedingt bis IT 8 möglich.
10. Zentrumschneiden 6-fach verwendbar.

Typenübersicht

Technische Informationen

Einlippen-Tiefbohrwerkzeug Typ 02

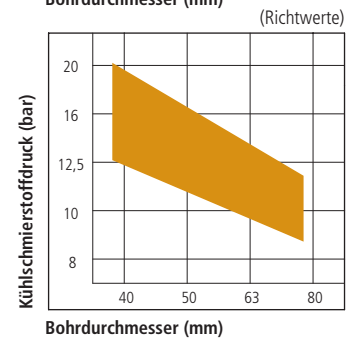

Leistungsdiagramme

Diese Werte sind Richtwerte für Vergütungsstahl mit $\sim 800 \text{ N/mm}^2$ und können je nach Werkstückstoff, Werkstückbeschaffenheit sowie Zustand der Werkzeuge abweichen.

Kühlschmierstoffwerte

Eine sichere Späneabfuhr ist nur dann gewährleistet, wenn der Kühlschmierstoff in ausreichender Menge und Druck dem Werkzeug zugeführt wird.

Richtwerte für das Vollbohren von verschiedenen Werkstückstoffen

Richtwerte für die Schnittgeschwindigkeit und den Vorschub sind der untenstehenden Tabelle zu entnehmen. Da beim Tiefbohren viele Faktoren das Ergebnis beeinflussen, müssen diese Werte bei Bedarf korrigiert werden.

| Werkstückstoffe Festigkeitswerte | Vc (m/min) | f (mm/U) bei Bohrdurchmesser (mm) | | | Hartmetallsorten | | |
|---|---------------|-----------------------------------|---------------|---------------|--------------------|----------------------|-----------------|
| | | 37,00 - 51,99 | 52,00 - 67,99 | 68,00 - 74,99 | Außen- schneide | Zentrum- schneide | Führungsleisten |
| Baustahl $\leq 700 \text{ N/mm}^2$ | 80 - 100 | 0,14 - 0,20 | 0,16 - 0,22 | 0,18 - 0,25 | P 25 B - 2 | P 40 B - 1 | P 20 B |

| Kupfer Cu-Gehalt < 99% | | | | | | | |

Vorteile / Typenübersicht

Typ 07

Vorteile – auf einen Blick

1. Neu entwickeltes Hochleistungswerkzeug für die Schruppbearbeitung.
2. Sehr wenige Verschleißteile für den gesamten Bohrbereich.
3. Neue Universal-Spanleitstufen für große Vorschübe und hohe Produktivität.
4. Einfache Handhabung durch feste Plattensitze.
5. Zum Einsatz auf Maschinen mit innerer KSS-Zuführung.
6. Kosten- und ressourcenschonende Aufarbeitung möglich (Neubestückung).

Vorteile / Typenübersicht

Typ 07 A

Vorteile – auf einen Blick

1. Einsatz auf nahezu allen Maschinen möglich (BAZ, konv. Drehmaschinen, TBM).
2. Wenige und kostengünstige Verschleißteile für den gesamten Bohrbereich.
3. Beste Maßhaltigkeit bei großen Bohrtiefen und geringer Bohrungsverlauf.
4. Hervorragende Oberflächengüte realisierbar.
5. Bohrtiefen von bis zu 20xD in einem Zug herstellbar.

Technische Informationen

Einlippen-Tiefbohrwerkzeug Typ 07/07 A

Leistungsdiagramme

Diese Werte sind Richtwerte für Vergütungsstahl mit ~ 800 N/mm² und können je nach Werkstückstoff, Werkstückbeschaffenheit sowie Zustand der Werkzeuge abweichen.

Kühlschmierstoffwerte

Eine sichere Späneabfuhr ist nur dann gewährleistet, wenn der Kühlschmierstoff in ausreichender Menge und Druck dem Werkzeug zugeführt wird.

Richtwerte für das Vollbohren von verschiedenen Werkstückstoffen

Richtwerte für die Schnittgeschwindigkeit und den Vorschub sind der untenstehenden Tabelle zu entnehmen. Da beim Tiefbohren viele Faktoren das Ergebnis beeinflussen, müssen diese Werte bei Bedarf angepasst werden.

| Werkstückstoffe + Festigkeit | Vc (m/min) | f (mm/U) bei Bohrdurchmesser (mm) | | | Hartmetallsorten | | |
|---|---------------|-----------------------------------|---------------|----------------|------------------|--------------|--------|

ELB Sonderwerkzeuge
ELB Auf- und Formbohrwerkzeuge Typ 99
Ø 12,00 bis 100,00 mm

Mit Führungszapfen

Beispiel: Werkzeuge für exakte Konzentrität zweier hintereinander liegender Bohrungen unterschiedlicher Durchmesser

Bohrungsgrund eben

Bohrungsgrund mit Radius

Werkzeuge auf Anfrage

Sonderwerkzeuge

Typ 99-08 Kernbohrwerkzeuge / Typ 99-09 Kernabstechwerkzeuge

| | |
|---|--|
| <p>Kernbohrwerkzeug Typ 99-08 Werkzeug-Ø 25,00 - 100,00 mm</p> |  |
| <p>Kernabstechwerkzeug Typ 99-09 Werkzeug-Ø 37,00 - 70,00 mm</p> |  |

Werkzeuglänge (abhängig von Verhältnis D/L) max. 1600 mm

Zur Entnahme von Kernen und Sacklochbohrungen für Materialuntersuchungen.
(Nicht geeignet für schlecht zerspanbare Werkstückstoffe!)

Bearbeitungsbeispiel: Probeentnahme Ø 41,5 mm aus einem Gusskörper einer Francisturbinenschaufel.

1. Pilotbohrung

2. Kernbohrung

Kernbohrwerkzeug ohne Rotation in die Pilotbohrung einfahren bis ca. 3-5 mm vor dem Bohrgrund.
Drehzahl + Vorschub ein.

Schnittwerte für allgem. Baustahl $V_c = 60 \text{ m/min}$ $f = 0,10 - 0,18 \text{ mm/U}$

3. Kern abstechen

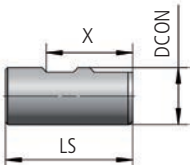

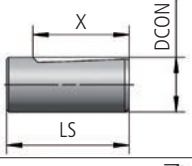

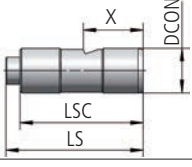

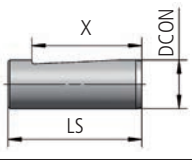

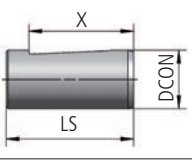

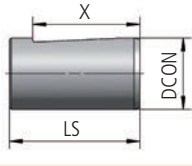

Kernbohrwerkzeug ohne Rotation einfahren bis ca. 3-5 mm vor dem Bohrgrund.
Drehzahl + Vorschub ein.

Schnittwerte für allgem. Baustahl $V_c = 20 - 30 \text{ m/min}$ $f = 0,03 - 0,06 \text{ mm/U}$ **bezogen auf den Kern-Ø**

Einspannhülsen

Typ 01 / Typ 02 / Typ 07 / Typ 08 / Typ 09

Die Einspannhülsen werden vorzugsweise nach DIN 1835 B bzw. DIN 6535 HA, HB und HE mit Kühlkanälen ausgeführt, können jedoch auch nach individuellen Bestellangaben geliefert werden.

| DCON Hülse (mm) | Typ | Abbildung | botek Bestell Nr. | für Werkzeugauslegung | |

weitere Grundhalter auf Anfrage

Spanleitstufen

1. Die Spanform wird durch die Spanleitstufe entscheidend beeinflusst.
2. Um einen störungsfeien Spanfluss bei optimaler Standzeit zu erhalten, muss eine möglichst ideale Spanform angestrebt werden.
3. Die Späne sollen so gebrochen werden, dass im Spänekanal kein Spänestau entsteht.
4. Zu kurze, gestauchte Späne belasten die Schneide und führen zu deren vorzeitigem Verschleiß bzw. Zerstörung der Schneide.

Zu bearbeitende Werkstoffe

| | | |
|--|--|---|
| SP 5 (positiver Spanbrecher Typ 02/07/07A) | | - unlegierte + legierte Stähle - Einsatzstähle + Vergütungsstähle - Nitrierstähle + Werkzeugstähle - martensitische Stähle - Grauguss + Sphäroguss - AL-Legierungen in Kombination mit höchsten Vorschüben |

| SP 1 Spanbrecher – 0 ° Spanwinkel (Typ 01/02/08) | | - unlegierte + legierte Stähle - Einsatzstähle + Vergütungsstähle - Nitrierstähle+ Werkzeugstähle - martensitische + austenitische Stähle - Grauguss/Sphäroguss - AL-Legierungen - Cu-Legierungen |
| SP 2 Spanbrecher – 0 ° Spanwinkel, Länge kürzer wie SP1 (Typ 01/02/07/07A/08) | | - Baustähle mit hoher Bruchdehnung - Nickel legierte Stähle - Nichtrostende Stähle (austenitisch/ferritisch/duplex) - Aluminium + Kupfer - Superlegierungen - Titan |
| SP 3 Spanbrecher nach Wahl des Kunden | | - nach Kundenangabe → Länge; Breite; Tiefe; Radius; Winkel → siehe VU-00-0614-B |

Technischer Anhang

Anwendungsvoraussetzung/Richtwerte zur Anbohrführung

Charakteristisch für das Einlippen-Tieflochbohren ist, dass der Kühlschmierstoff durch den Kühlkanal im Werkzeug zugeführt und zusammen mit den Spänen in der V-förmigen Nut (Sicke) des Bohrschaftes aus der Bohrung herausgeführt wird.

Der Einlippenbohrer ist ein einschneidiges Bohrwerkzeug ohne Selbstzentrierung. Beim Anbohren muss das Werkzeug durch eine Bohrbuchse oder eine Pilotbohrung geführt werden.

Die Qualität der Anbohrführung beeinflusst die Standzeit des Werkzeuges und den Bohrungsmittenverlauf.

Voraussetzungen für erfolgreiches Tiefbohren sind:

1. Eine leistungsfähige Kühlschmierstoff- und Filteranlage mit einer Filterung von 20 µm bis 30 µm. (Je kleiner der Bohrungsdurchmesser, desto leistungsfähiger sollten Kühlschmierstoff- und Filteranlage sein.)
2. **Geeigneter Kühlschmierstoff**, d.h. Tiefbohröl oder Emulsion (min. 10-12 % Konzentration mit Additiven) sollte in ausreichender Menge und Druck zur Verfügung stehen. Minimalmengenschmierung (MQL) ist unter bestimmten Voraussetzungen möglich.
3. **Anbohrführung** durch Bohrbuchse (Tiefbohrmaschine) oder Pilotbohrung am Werkstück (BAZ).

mit Bohrbuchse

Bei der Anwendung auf Tiefbohrmaschinen empfehlen wir die Verwendung von Bohrbuchsen mit Toleranz F7.

Richtwerte zur Anbohrführung

| | Bohrbereich (mm) | Maße für die Anbohrführung (Pilotbohrung/Bohrbuchse) | |
|--|---------------------|--|--------------------------|
| | | L (mm) | D (mm) zum Werkzeug-Ø |
| | 12,00 - 17,99 | ca. 1,50 x D | + 0,016 bis 0,034 |
| | 18,00 - 29,99 | ca. 1,50 x D | + 0,020 bis 0,041 |
| | 30,00 - 49,99 | ca. 1,25 x D | + 0,025 bis 0,050 |
| | 50,00 - ... | ca. 1,00 x D | + 0,030 bis 0,060 |

Die in der Tabelle angegebenen Maße sind Richtwerte und entsprechen ISO Toleranzfeld F7. ISO Toleranzfeld F8 nur bedingt möglich. Um beim Einfahren in die Pilotbohrung Ausbrüche zu vermeiden, ist je nach Bearbeitungsfall eine Einführphase „F“ empfehlenswert.

1. Prüfen Sie **vor Einsatz** der Werkzeuge, ob die **maschinellen Voraussetzungen** für sicheres Tiefbohren gegeben sind! **Insbesondere die Abdichtung bzw. Abdeckung der Maschine sollte dem Bediener ausreichenden Schutz vor eventuell umherfliegenden Feststoffen (z.B. Späne) und vor austretendem Kühlschmierstoff (Emulsion bzw. Tiefbohröl) bieten.** Wenden Sie sich bitte an Ihren Maschinenhersteller!
2. **Unsachgemäße Handhabung oder Gebrauch eines Tiefbohrwerkzeuges kann zu ernststen Verletzungen führen**, z.B. Schnittwunden bei unvorsichtiger Berührung der Schneide(n).
3. Tiefbohrwerkzeuge haben konstruktionsbedingt eine Unwucht! Deshalb müssen diese Werkzeuge **beim Anbohrvorgang** mit der Bohrspitze in eine ausreichend lange Pilotbohrung oder Bohrbuchse eingeführt werden.
4. **Werkzeugabstützung: ungestützte Länge(n) des Werkzeuges (L)** darf/dürfen die Werte der untenstehenden Tabelle **niemals** übersteigen! Ist eine ungestützte Länge des Werkzeuges größer, kann das Werkzeug brechen und unkontrolliert umhergeschleudert werden!

| Werkzeugtyp | Maximal ungestützte Länge des Werkzeugs | |
|-----------------|---|-----------------------------|
| | Bohrdurchmesser D | Maximal ungestützte Länge L |
| Typ 01 / Typ 07 | 12,00 - 20,99 | ca. 40 x D |
| | 21,00 - 30,99 | ca. 35 x D |
| | 31,00 - 40,99 | ca. 30 x D |
| | 41,00 - ... | ca. 25 x D |
| Typ 02 | 37,00 - 44,99 | ca. 40 x D |
| | 45,00 - 59,99 | ca. 30 x D |
| | 60,00 - 74,99 | ca. 25 x D |
| Typ 07A | 51,00 - 113,99 | ca. 25 x D |

5. Das Werkzeug muss **ohne Rotation** bzw. mit stark verlangsamer Drehzahl (<50 U/min) in die Pilotbohrung oder Bohrbuchse eingeführt werden (siehe Abbildung). Erst dann kann Kühlmittel zugeführt und die Drehzahl erhöht werden.
6. **Nach Erreichen der Bohrtiefe** mit nicht rotierendem Werkzeug bzw. stark verlangsamer Drehzahl (< 50 U/min) aus der Bohrung zurückfahren, danach die KSS-Zufuhr abschalten.
7. Beim Schleifen bzw. Erwärmen von Hartmetall werden gesundheitsgefährdende Stoffe (z.B. Wolframkarbid, Kobalt etc.) freigesetzt. Sorgen Sie dafür, dass durch geeignete Absaugungen und andere Maßnahmen (z.B. Schutzbrillen, -kleidung) die gesetzlich vorgeschriebenen Grenzwerte bezüglich der Schadstoffbelastung eingehalten werden.
8. **Folgen bei Nichteinhaltung** unserer Anwendungshinweise Nr. 1 - 7.

Werden unsere Tiefbohrwerkzeuge falsch eingesetzt und unsere Anwendungsempfehlungen nicht richtig befolgt, können Personen- und/oder Sachschäden entstehen.

Bei Werkzeugbruch und unkontrolliertem Umherschleudern des Werkzeuges besteht **Lebensgefahr!**

Bitte beachten Sie, dass alle hier genannten Anwendungshinweise bzw. Werte lediglich Richtwerte sind. Wir haften nicht für Schäden, die aus unsachgemäßer Handhabung unserer Tiefbohrwerkzeuge, Bedienungsfehlern, mangelhaften maschinellen Voraussetzungen bzw. unsachgemäßem Gebrauch unserer Werkzeuge resultieren!

Sie haben dazu noch Fragen? Bitte rufen Sie uns unter T +49 7123 38 08-0 an. Wir beraten Sie gerne.

Technischer Anhang

Bohrungsqualität

Für die Erzielung optimaler Bohrergebnisse bei **Verwendung von Tiefbohrwerkzeugen mit Wendepplatten** müssen verschiedene Kriterien beachtet werden. Neben der Produktqualität des Werkzeuges sind die Maschinen-Ausführung sowie ein zum Tiefbohren geeigneter Kühlschmierstoff weitere wichtige Einflussfaktoren. Von großer Bedeutung ist auch die Wahl der richtigen Schnittwerte.

Bei der technischen Auslegung der Werkzeuge müssen u. a. berücksichtigt werden:

1. Werkstückstoff, dessen Festigkeit und Zustand
2. Bohrungsdurchmesser und Toleranz
3. Hartmetallqualität/Beschichtung
4. Spanleitstufe

Erreichbare Bohrungstoleranzen

Oberflächengüte

| Rauheitsklasse | | N8 | N7 | N6 | N5 |
|---------------------------|------------------|-----|------|-----|-----|
| Qualitätsbereich | | | | | |
| Oberflächen- rauhwerte | Rt μm | 21 | 11,5 | 6,2 | 3,4 |
| | Ra μm | 3,2 | 1,6 | 0,8 | 0,4 |
| | Rz μm | 14 | 7,6 | 4,5 | 2,2 |

(Richtwerte)

Bohrungsmittenverlauf

Die besten Ergebnisse werden mit drehendem Werkzeug bei gleichzeitig gegenläufiger Werkstückdrehung und stehender Anbohrführung erzielt (siehe „Z“).

Wegen unterschiedlichster Werkstückformen und z.T. auch maschinenbedingt wird jedoch häufig entweder mit drehendem Werkstück (siehe „Y“) oder mit drehendem Werkzeug (siehe „X“) gearbeitet.

Generell wird der Bohrungsmittenverlauf durch passgenaue Anbohrführung positiv beeinflusst. Besonders zu beachten sind die Durchmesser-Qualität der Pilotbohrung oder Bohrbuchse sowie die Achsenposition der Führungsbohrung zur gewünschten Bohrung.

Ungünstige Maschinenbedingungen verschlechtern das Ergebnis.

Bohrungsgeradheit

Die Durchbiegung des Bohrerschafes beeinflusst den Verlauf und die Geradheit der Bohrung in besonderem Maße. Längere Einlippenbohrer (mit aufgelötetem Bohrkopf) müssen deshalb durch Führungen (Lünetten) abgestützt werden.

Rundheit (Kreisformgenauigkeit)

Mit Einlippenbohrern hergestellte Bohrungen lassen in ihrer Kreisformgenauigkeit kaum zu wünschen übrig. Sie sind dem herkömmlichen Bohrverfahren mit Spiralbohrern um ein Vielfaches überlegen.

Bestwerte liegen bei 10 µm.

Eilfertigung:

Spezialisiert auf die Herstellung bestimmter Werkzeuge innerhalb kürzester Zeit.

Mit der „botek-EILFERTIGUNG“ können wir Werkzeuge, die nicht in unserem Lagerprogramm enthalten sind, kurzfristig fertigen.

Das Lieferprogramm umfasst folgende Werkzeuge:

- Ein- bzw. Zweilippenbohrer mit aufgelötetem Bohrkopf **Typ 110/Typ 120**
- Einlippenbohrer in VHM-Ausführung **Typ 113**
- Einlippenbohrer mit Wendepplatten **Typ 01/Typ 07**

Bestellen Sie schnell und unkompliziert per Fax oder E-Mail.

Ihr direkter Ansprechpartner in unserem Hause ist:

Herr Stephan Falk

T +49 7123 38 08-121

F +49 7123 38 08-192

E-Mail falk@botek.de

Lagerprogramm:

- **Weltweit erstes Lagerprogramm für Einlippen-Tiefbohrwerkzeuge Typ 01**
mit wechselbaren Schneidplatten und Führungsleisten
- **Einlippenbohrer** mit aufgelötetem Bohrkopf Typ 110 – **jetzt noch mehr Werkzeuge ab Lager lieferbar**

Detaillierte Informationen zum Lagerprogramm und zur Eilfertigung finden Sie in unserem neuen Prospekt „botek-Eilfertigung/Lagerprogramm“ oder unter www.botek.de.

Service

Neubestückung

Werkzeuge mit aufgelötetem Bohrkopf können mit einem neuen Bohrkopf versehen werden (NB). Dabei erhalten Sie ressourcenschonend und kostengünstig ein nahezu neuwertiges Werkzeug.

Zubehör

Bearbeitungszubehör für unsere Tiefbohrwerkzeuge mit wechselbaren Schneidplatten und Führungsleisten bieten wir gerne an.

Bitte fragen Sie bei uns an.

Weitere Informationen finden Sie unter www.botek.de.

Bauteil Bezeichnungen

1. Bohrwerkzeug komplett
2. Schneidplatte
3. Schraube für Schneidplatte
4. Einstellplatte
5. Schraube für Einstellplatte
6. Führungsleisten
7. Schraube für Führungsleisten

Schneidwerkzeugdaten nach ISO 13399

- DC = Werkzeugdurchmesser
 OAL = Gesamtlänge
 DCON = Aufnahme-Ø
 LS = Schaftlänge
 LCF = Sickenlänge
 LU = Nutzlänge/Bohrtiefe
 LF2 = Abstand min.

| LF2 | Ø 12 - 17,99 mm | Ø 18 - 31,99 mm | Ø 32 - ... mm |
|------------------|-----------------|-----------------|---------------|
| Typ 01/02/07/07A | 50 mm | 80 mm | 100 mm |

Berechnung der Gesamtlänge

Beispiel: 2. Schneidplatte

$$LU + LF2 + LS = OAL$$

$$LU (330 \text{ mm}) + LF2 (65 \text{ mm}) + LS (60 \text{ mm}) = OAL (445 \text{ mm})$$

DEEP HOLE DRILLING SYSTEMS
SOLID CARBIDE TOOLS

Deep hole drilling tools

Type 01, 02, 07, 07A

botek

NEW: Stock program Type 01

System single flute gundrills

The botek company

Manufacturing deep and precise holes is a technical challenge when processing metal. Accordingly specialising in deep hole drilling technology was the founding idea in 1974 of botek Präzisionsbohrtechnik GmbH in Riederich.

Botek grew to be an international supplier of deep hole drilling tools. Over 550 employees in the main company develop and manufacture single and two fluted tools, deep hole drilling tools BTA and Ejector systems as well as special tools.

A complete product program, regarding all deep hole drilling aspects and a team of highly qualified and dedicated cutting specialists make botek a competent partner for the automobile industry and their suppliers, shipbuilding industry, hydraulic industry as well as motor, gear and machine building companies.

- Please note our safety pointers at www.botek.de.
- Our General Standard Terms and Conditions, which we assume as known, apply.
- We reserve the right to make modifications in the interest of technical improvement. Such modifications cannot, in principle, be accepted as justifiable reasons for complaints.
- Subject to change. The manufacturer accepts no responsibility for misprints and other errors.

Advantages/Overview

Type 01

Advantages

1. New, high-performance deep hole drilling tool with a modern, user-friendly design.
2. Very high operational efficiency combined with optimum cutting capacity.
3. Ideally suited to CNC machines with a coolant system. Drilling depths up to $40 \times D$ are possible in a single drilling cycle. Tools also produce excellent results when used on deep hole drilling machines.
4. No regrinding needed.
5. Various indexable insert chip breakers are available according to material to be processed. Coated indexable inserts and guide pads are also available.
6. Easy exchange of indexable inserts and guide pads. No need to adjust setting within ± 0.01 mm diameter.
7. When using matching interchangeable parts, the drill head \varnothing may, however, be adjusted within a range of 0.5 mm.
8. The model with extended guide pads (Type 01-010) is also suitable for crosshole drilling.
9. Drilling grades up to IT 8 are possible.
10. Retipping is possible.

Overview

| Type | Drilling range | |
|---|---|--|
| Type 01-001 Gundrill for solid drilling | Standard version with 2 guide pads Drilling range: \varnothing 12.00 - 17.99 mm | |
| Type 01-000 Gundrill for solid drilling | Standard version with 2 guide pads Drilling range: \varnothing 18.00 - 43.99 mm | |
| Type 01-011 Gundrill for solid drilling | Version with extended guide pads 4 pieces Drilling range: \varnothing 12.00 - 17.99 mm | |
| Type 01-010 Gundrill for solid drilling | Version with extended guide pads 5 pieces Drilling range: \varnothing 18.00 - 43.99 mm | |
| Type 01-020 Gundrill for solid drilling | Milled shank with 2 guide pads Drilling range: \varnothing 18.00 - 43.99 mm limited length depending on drill diameter, on request | |

Ordering example: 01-2513-000-25.00-1000-ZH32-10

Ordering data Type 01

Ø 12.00 to 17.99

| Diameter range | Drilling tool | |

Performance diagrams

These values are guide values for toughened steel rated ~ 800 N/mm² and may deviate depending on workpiece material and characteristics, as well as tool condition.

Coolant information

Proper chip removal is only assured if the coolant is supplied to the tool in sufficient quantity and under sufficient pressure.

Guide values for deep hole drilling of different materials

Guide values for cutting speed and feed rate are shown in the table below.

As there are many factors that can affect the results of deep-hole drilling, these values must be adjusted if necessary.

| Material / Mechanical strength properties | Cutting speed (m/min) | Feed (mm/rev) for drill diameter (mm) | | | | Carbide grades | | |
|---|-----------------------|---------------------------------------|---------------|---------------|-------------|------------------|--------------|-----------|
| | | 12.00 - 17.99 | 18.00 - 24.99 | 25.00 - 31.99 | 32.00 - ... | Indexable insert | | Guide pad |
| | | | | | | up to Ø 17.99 | from Ø 18.00 | |
| Construction steel ≤ 700 N/mm ² | 80 - 100 | 0.06 - 0.10 | 0.08 - 0.11 | 0.10 - 0.14 | 0.13 - 0.16 | K 30 B - 1 | P 25 B - 1 | P 20 B |
| Case hardened steel ≤ 700 N/mm ² | | | | 0.10 - 0.13 | 0.12 - 0.15 | | | |
| Case hardened steel ≤ 1,100 N/mm ² | 70 - 80 | 0.06 - 0.10 | 0.08 - 0.11 | 0.10 - 0.14 | 0.13 - 0.16 | K 30 BX - 91 | P 25 BX - 91 | |
| Heat treated steel ≤ 700 N/mm ² | | | | 0.10 - 0.13 | 0.12 - 0.15 | | | |
| Heat treated steel ≤ 1,100 N/mm ² | 55 - 75 | 0.06 - 0.10 | 0.08 - 0.11 | 0.10 - 0.14 | 0.13 - 0.16 | K 10 B - 1 | K 10 B-2 | |

High performance inserts for high productivity and wide range of application

New chip breaker SP91 for Type 01 Ø 12.00 to 43.99 mm

Advantages

1. **Higher feedrate and higher cutting speed** compared to chip breakers SP1 and SP2.
2. **Up to 400% higher productivity and more** compared to conventional gundrills.
3. **Higher lifetime per insert** together with improved process reliability.
4. Positive chip breaker for good chip control also with long chipping steels.
5. Application for material groups **ISO P** and **ISO M**.
6. Available in **standard grades K30BX** (Ø 12.00 - 17.99 mm) and **P25BX** (Ø 18.00 - 43.99 mm).

Sample applications Type 01/Comparison

| | | |
|-----------------------|------------------------|-----------------------|
| Material: | 40CrMnNiMo8-6-4/1.2738 | X17CrNi16-2/1.4057 |
| Strength: | 1100 N/mm ² | 950 N/mm ² |
| Application: | Mold production | Special machine |
| Type of tool: | Type 01 (Gundrill) | Type 01 (Gundrill) |
| Drill-Ø: | 15 mm | 13.5 mm |
| Drilling depth: | 1100 mm | 260 mm |
| Cutting speed v_c : | 60 m/min | 90 m/min |
| Feed f : | 0.11 mm/rev. | 0.125 mm/rev. |
| Coolant: | Water soluble/Emulsion | Oil |

Advantages

1. New, high-performance deep hole drilling tool with a modern, user-friendly design.
2. Very high operational efficiency combined with optimum cutting capacity.
3. Ideally suited to CNC machines with a coolant system. Drilling depths up to $40 \times D$ are possible in a single drilling cycle. Tools also produce excellent results when used on deep hole drilling machines.
4. No regrinding needed.
5. Various indexable insert chip breakers are available according to material to be processed. Coated indexable inserts and guide pads are also available.
6. Easy exchange of indexable inserts and guide pads. No need to adjust setting within ± 0.01 mm diameter.
7. When using matching interchangeable parts, the drill head diameter may, however, be adjusted within a range of 0.5 mm.
8. The model with extended guide pads (Type 02-010) is also suitable for crosshole drilling.
9. Drilling grades up to IT 8 are possible.
10. Centre insert with 6 cutting edges.

Overview

| Type | Drilling range | |
|---|--|--|
| Type 02-000 Solid drilling tool | Standard version with 3 guide pads Drilling range: Ø 37.00 - 74.99 mm (larger diameters on request) | |
| Type 02-010 Solid drilling tool | Version with extended guide pads (7 pcs) Drilling range: Ø 37.00 - 74.99 mm (larger diameters on request) | |

Larger diameters on request.

Performance diagrams

These guide values are for drilling alloyed steel (800 N/mm²) and can vary for other workpiece materials and tool conditions (wear).

Coolant information

Sufficient coolant must be supplied to the tool for troublefree chip removal.

Guide values for deep hole drilling of different materials

Guide values for cutting speed and feed rate are shown in the table below.

As there are many factors that can affect the results of deep-hole drilling, these values must be adjusted if necessary.

| Material / Mechanical strength properties | Cutting speed (m/min) | Feed (mm/rev) for drill diameter (mm) | | | Carbide grades | | |
|--|-----------------------|---------------------------------------|---------------|---------------|------------------|---------------|------------|
| | | 37.00 - 51.99 | 52.00 - 67.99 | 68.00 - 74.99 | Indexable insert | Centre insert | Guide pads |
| Free machining steel ≤ 700 N/mm ² | 80 - 100 | 0.14 - 0.20 | 0.16 - 0.22 | 0.18 - 0.25 | P 25 B - 2 | P 40 B - 1 | P 20 B |
| Case hardening steel ≤ 700 N/mm ² | | | | | | | |
| Case hardening steel ≤ 1,100 N/mm ² | 70 - 80 | 0.12 - 0.18 | 0.14 - 0.20 | 0.16 - 0.22 | P 25 B - 5 | P 40 B - 1 | |
| Heat treated steel ≤ 700 N/mm ² | 70 - 90 | 0.14 - 0.20 | 0.16 - 0.22 | 0.18 - 0.25 | | | |
| Heat treated steel ≤ 1,100 N/mm ² | 55 - 75 | 0.12 - 0.18 | 0.14 - 0.20 | 0.16 - 0.22 | K 10 B - 2 | K 10 - 1 | |
| Nitriding steel ≤ 1,100 N/mm ² | | | | | | | |
| Ferritic steel ≤ 900 N/mm ² | 60 - 80 | 0.12 - 0.16 | 0.14 - 0.18 | 0.16 - 0.20 | P 25 B - 5 | P 40 B - 1 | |
| Austenitic steel (stainless) | | | | | | | |
| Heat resisting steel (stainless), Tool steel | 50 - 70 | 0.12 - 0.18 | 0.14 - 0.20 | 0.16 - 0.22 | P 25 B - 5 | P 40 B - 1 | |
| Steel castings ≤ 700 N/mm ² | 60 - 80 | 0.14 - 0.20 | 0.16 - 0.22 | 0.18 - 0.25 | | | |
| Nodular cast iron ≤ 1,100 N/mm ² | 65 - 80 | 0.16 - 0.20 | 0.18 - 0.25 | 0.20 - 0.25 | K 10 - 1 | K 10 - 1 | |
| Cast iron, alloyed and unalloyed | 70 - 100 | | | | | | |
| Aluminium and Aluminium alloys | 100 - 200 | 0.12 - 0.16 | 0.14 - 0.18 | 0.16 - 0.20 | K 10 - 1 | K 10 - 1 | |
| Copper Cu-content < 99% | 120 - ... | 0.10 - 0.14 | 0.12 - 0.16 | 0.14 - 0.18 | | | |

Advantages/Overview

Type 07

Advantages

1. Newly developed high performance drilling tool for roughing.
2. Few exchangeable spare parts for the whole drilling range.
3. Minimal universal chip breaker design for high feed rates and high productivity.
4. Simple handling through fixed insert pockets.
5. Suitable for almost all machines with inner coolant supply.
6. Retipping is possible.

Overview

| Type | Drilling range | |
|---|---|--|
| Type 07-000 Solid drilling tool | Version with 2 guide pads Drilling range: Ø 25.00 - 50.99 mm (larger diameters on request) | |
| Type 07-010 Solid drilling tool | Version with 5 guide pads Drilling range: Ø 25.00 - 50.99 mm (larger diameters on request) | |

Advantages/Overview

Type 07 A

Advantages

1. Suitable for almost all machines (machining center, conventional lathe, deep hole drilling machine).
2. Few and cost-effective spare parts for the whole drilling range.
3. Best dimensional accuracy at large drilling depths and smallest centerline deviation.
4. Excellent surface quality realizable.
5. Drilling depths up to 20xD are possible in a single drilling cycle.

Special tools

Type 99-08 Trepanning tool/Type 99-09 Core cutter

| | |
|--|--|
| <p>Trepanning tool Type 99-08 \varnothing 25.00 - 100.00 mm</p> |  |
| <p>Core cutter Type 99-09 \varnothing 37.00 - 70.00 mm</p> |  |

Tool length (depending on length to diameter ratio) max. 1600 mm

For blind holes and to remove a core for material samples
 (not available for difficult to machine materials)

Machining example: Taking a sample \varnothing 41.5 mm out of a cast iron francis turbine.

1. Pilot hole

2. Trepanning

Insert trepanning tool (without rotation) into the pilot hole up to approx. 3-5 mm before reaching the bottom of the bore. Start rotational speed and feed rate.

Cutting values for general construction steel $V_c = 60$ m/min $f = 0.10 - 0.18$ mm/rev.

3. Core cutting

Insert trepanning tool (without rotation) into the pilot hole up to approx. 3-5 mm before reaching the bottom of the bore. Start rotational speed and feed rate.

Cutting values for general construction steel $V_c = 20 - 30$ m/min $f = 0.03 - 0.06$ mm/rev. **based on the core- \varnothing**

Drivers normally are supplied in compliance with DIN 1835 B or DIN 6535 HA, HB and HE, but they can also be made to order.

additional spindle adapters on request

Chip breakers

1. The chip breaker has a decisive influence on the chip form.
2. To achieve a trouble-free chip flow and optimum tool life, the aim is to produce an ideal chip form.
3. The chips should be fractured in such a way that a chip congestion is avoided.
4. Too short and compressed chips strain the cutting edges and lead to an early wear, or even destruction of the insert.

Technical appendix

Requirements for application/Dimensions for the guide hole

The characteristic of the single flute gundrilling process is that coolant is fed through the coolant hole in the tool and exits along with the chips in the V-shaped groove (flute) on the drill tube from the drilled hole. The coolant also provides lubrication to the drill periphery.

The gundrill is a single-edged tool without self-centering. When positioning the drill, the tool must be guided through a drill bush or a pilot hole.

The quality of the guide hole affects the drilling performance:

1. An efficient coolant and filtration system with a coolant filtration of 20 μm to 30 μm (the smaller the drill diameter, the better the coolant and filtration system should be).
2. **Suitable coolant**, i.e. deep hole drilling oil or emulsion (min. 10-12% concentration, with additives) has to be provided in sufficient quantity and pressure. Minimum quantity lubrication (MQL) may be used under certain conditions.
3. **Guidance** with a drill bush (deep hole drilling machine) or a pilot hole (machining centre).

with drill bush

In application with deep hole drilling machine we recommend to use drill bush with F7 hole tolerance.

Dimensions for the guide hole

| | Drill diameter (mm) | Dimensions for guide hole (pilot hole / drill bush) | |
|--|---------------------|---|-----------------------------|
| | | L (mm) | D (mm) to tool- \emptyset |
| | 12.00 - 17.99 | approx. 1.50 x D | + 0.016 to 0.034 |
| | 18.00 - 29.99 | approx. 1.50 x D | + 0.020 to 0.041 |
| | 30.00 - 49.99 | approx. 1.25 x D | + 0.025 to 0.050 |
| | 50.00 - ... | approx. 1.00 x D | + 0.030 to 0.060 |

The dimensions specified in the table are guide values and comply with ISO tolerance field F7. ISO tolerance F8 is possible under specific conditions. To avoid chipping of the cutting edge, a chamfered pilot hole (F) is recommended depending on machining requirements.

1. **Before using the drills make sure the machine has the necessary equipment to do proper deep hole drilling. The machine should have suitable safety guarding for protection from cutting chips and coolant for operator.** Check with machine builder!
2. **Improper use or handling of deep hole drilling tools can cause serious injuries**, e.g. skin cuts from the cutting edge
3. Deep hole drilling tools are not self centering and can be unbalanced. Therefore the drills must be guided **during the start of the drilling cycle** by means of a sufficiently long drill bush or pilot hole (see detail „Z“ on below illustration). For information on the guide hole (pilot hole).
4. **Tool support: Unsupported drill length** should never exceed the dimensions as shown on table. If the unsupported drill length is exceeded the drill might cause injury!

| Type | Max. unsupported length of the tool | |
|-----------------|-------------------------------------|---------------------------|
| | Drill diameter D | Max. unsupported length L |
| Type 01/Type 07 | 12.00 - 20.99 | approx. 40 x D |
| | 21.00 - 30.99 | approx. 35 x D |
| | 31.00 - 40.99 | approx. 30 x D |
| | 41.00 - ... | approx. 25 x D |
| Type 02 | 37.00 - 44.99 | approx. 40 x D |
| | 45.00 - 59.99 | approx. 30 x D |
| | 60.00 - 74.99 | approx. 25 x D |
| Type 07A | 51.00 - 113.99 | approx. 25 x D |

5. The gundrill is fed into the drill bush or pilot hole **while non rotating** or rotated slowly at < 50 RPM. Then the coolant and the machine spindle should be started.
6. **After reaching the drilling depth** switch off the coolant and retract with the spindle stopped or slowly rotating at < 50 RPM.
7. Grinding of carbide produces dust (cobalt, etc.) that may be potentially hazardous. Use adequate ventilation and safety glasses during grinding.
8. **Consequences of not following** our application notes No. 1 - 7.

Using botek gundrills other than directed may cause personal injury.

Tool breakage and unsupported gundrills can be extremely dangerous. **Please use with caution and care!**

Please note that all application notes and values contained herein are intended as guidelines only. We do not accept any liability for damages caused by improper handling of botek deep hole drilling tools, operating errors, unsuitable machinery or misuse while using our tools!

Do you have any further queries? Please call up at +49 7123 38 08-0. We will be pleased to offer you advice.

Technical appendix

Drilling quality

To achieve optimum drilling results when using **deep hole drilling tools** with indexable inserts and guide pads, various criteria must be applied. In addition to tool design, key factors are machine design and construction, process techniques, pressurised and filtered deep hole drilling coolant. Selection of proper cutting parameters is also a significant factor.

The key factors botek considers when designing gundrills:

1. Material type
2. Diameter, tolerance and surface finish
3. Carbide grade and coating
4. Chip breaker

Achievable drilling tolerances

Surface quality

| Roughness class | | N8 | N7 | N6 | N5 |
|-------------------|------------------|-----|------|-----|-----|
| Quality area | | | | | |
| Surface roughness | Rt μm | 21 | 11.5 | 6.2 | 3.4 |
| | Ra μm | 3.2 | 1.6 | 0.8 | 0.4 |
| | Rz μm | 14 | 7.6 | 4.5 | 2.2 |

(Guide values)

under normal conditions
 under favourable conditions

Centerline deviation (drift)

Counter-rotation: The optimum results are achieved with a rotating tool and simultaneous workpiece counter-rotation: See „Z“.

Workpiece rotating: The next best technique involves the workpiece rotating with the gundrill non-rotating: See „Y“.

Tool rotating: See „X“.

In all applications tool drift is minimised by using a close fitting pilot bore or guide bushing during gundrilling. Angular alignment of pilot bore with desired gundrill bore is imperative.

With a guide bushing, alignment and distance from the workpiece are also important.

Hole straightness

Whipping or deflection of the gundrill flute plays a decisive role in hole straightness and run out in the workpiece. Carbide tipped gundrills must be supported by a steady rest or whip guide every 40 diameters.

Roundness

Hole roundness is a primary advantage of gundrilling over conventional twist drilling. Hole roundness measurements as low as 10 μm are possible.

Express Order Line/Stock program

Express order line:

specialized in manufacturing **certain tools quickly**.

We have established an Express production line which specializes in manufacturing certain tools quickly.

Product range:

- Single flute gundrills/twin fluted drills with brazed carbide tip **Type 110/Type 120**
- Single flute gundrills in solid carbide design **Type 113**
- Single flute gundrill with indexable inserts and guide pads **Type 01/Type 07**

You can order by fax or e-Mail straightforward and quickly.

We are pleased to send you our order form.

Contact person:

Mr. Andreas Lehmann
P +49 7123 38 08-394
F +49 7123 38 08-138
E-Mail Lehmann@botek.de

Stock program:

- **Worldwide first stock program for gundrills** with indexable inserts and guide pads **Type 01**
- **Single flute gundrills** Type 110 with brazed carbide tip – **extended size range**

More information regarding the Express order line and our stock program please see our new homepage, www.botek.de.

Service

Retipping

Tools with brazed drill head can be refitted with a new head.
You will receive an almost new tool – resource friendly and cost-efficient.

Accessories

Accessories for our deep hole drilling tools Type 01, 02, 07 are also available.

More information can be found at www.botek.de

Tool Components

1. Tool complete
2. Insert
3. Screw for insert

| LF2 | Ø 12 - 17.99 mm | Ø 18 - 31.99 mm | Ø 32 - ... mm |
|-------------------|-----------------|-----------------|---------------|
| Type 01/02/07/07A | 50 mm | 80 mm | 100 mm |

Tool length calculation

Example: 2nd Insert

$$LU + LF2 + LS = OAL$$

$$LU (330 \text{ mm}) + LF2 (65 \text{ mm}) + LS (60 \text{ mm}) = OAL (445 \text{ mm})$$
